Cubic RoIP
Expert Integration Service

Features and Benefits

- **Reduce Installation Time – Cubic engineers can quickly bring up your RoIP and radio services**

- **Optimize Radio Tuning – our experts have extensive experience with a wide variety of radio vendors and models**

- **Security Best-Practices – we will help you set up secure tunnels and encryption to cloud-based dispatch clients**

- **Have Confidence In Your Deployment – you don't need to be an expert, leave that to us and get a quality result**

Expert Integration is a professional service that is offered to assist customers with their initial installation and turn-up of the Cubic | Vocality RoIP and M3-SE-MFGW. The service augments the customer's ability with Cubic's networking and Land Mobile Radio expertise.

Deploying new capabilities into a network can be technically challenging and time-consuming, even for seasoned network administrators. With Cubic | Vocality's Expert Integration services, our technical engineers work with you on your schedule to ensure that your deployment of ROIP technology is secure, fully functional, and comprehensive. Contact us today to learn more about how our Expert Integration services can assist with audio port tuning, talk-groups, SIP troubleshooting, securing network traffic, and more.

START-TO-FINISH SUPPORT

Our Integration specialist will help you every step of the way, including setup of the RoIP device; configuring the RoIP for connection to the third-party dispatch systems; talk groups; assistance with the donor radio levels; plus conducting a range of tests to ensure that the installation is fully working.

DIRECT SPECIALIST ACCESS

Our remote installation process is a proven model for success. An engineer is assigned to your project and will review your planned installation. On installation day, our engineer will contact and remotely work with your onsite engineer to configure and tests your setup. Your unique solution will be explained to you in a way that matches your abilities and experience. After turn-up, the engineer who assisted your installation will be consulted if any complex support issues arise.

EASY ONLINE BOOKING

Before scheduling installation, the customer completes a simple online form that contains all the information our implementation specialist requires to complete the project. Knowing these details ahead of time is what garners success. A suitable installation time will be setup once the form has been completed.
