

Mantis II GDT

Features & Benefits

- **Modular System:** Integrated CDL terminal with high-gain antenna
- **Maximum Dislocation:** 7km dislocation from Control Group
- **Man-Portable Networking:** Easily deployable even in the most harsh environments
- **Data Link Interoperability:** CDL specification compliant (Standard and Bandwidth Efficient)

Cubic's Mantis II Ground Data Terminal (GDT) is a high-performance data terminal that supports long range, high data rate communications with airborne platforms equipped with a multitude of DoD standard Common Data Link (CDL) waveforms. The Mantis II antenna group is a powerful Data Link terminal capable of operating in the harshest environments to provide valuable real time data and video. Mantis II can be deployed in less than 10 minutes providing ground forces with secure expeditionary communications. The onboard GPS and compass provide precise positioning and alignment allowing the Mantis II to perform automatic calibration, making remote set-up easy.

Mantis II supports data transfers from Ku-band CDL-equipped aircraft, including Predator, Reaper, Sky Warrior, Fire Scout, LITENING targeting pod and others. The Mantis II provides operating ranges up to 250 nmi or more, depending on system configuration.
